SAY *HELLO* TO

ADAM

Automated Data Analytics for Movement

ADAM is an automated data decision making algorithm that will analyze your patients motion health data and suggest insights for areas to focus on and review for further clinical decisions.

ADVANCING TRUST FROM DATA INTO PRACTICE

Assisting Healthcare Providers With Insights....

Your Patients Motion Age
ADAM will provide your patient's motion age and compare it to their birth age giving you a clear tool for patient communication.

Activities Of Daily Living Rating
ADAM will compare your patients results against standards for activities of daily living and alert you if any of the areas are not met.

Joint Level Vulnerability
ADAM will alert you of the top 3 area of concern that you might want to focus more exam attention on.

Normative Analysis
ADAM will compare your patients results against the worlds largest data base of human movement with over 1 million movement files to help you understand if your patient in or out of normative ranges.

Overall Readiness
ADAM will rate your patient against the best version of themselves to provide you an overall motion health status for a more holistic and simple motion health monitoring approach.
